A range of standard panels in copper washed or galvanised wire for immediate delivery to the industrial user.

General use

The use of Betafence Stockmesh in industrial environments is constantly increasing, particularly in the areas of safety, security, storage and for building and construction. The diameter of the wire can be as large as 8,0 mm and is available in a standard range of panels. It is easy to work with and is easily combined with other materials. This makes the mesh multi-functional and can be used in all types of construction.

Benefits

- Available from stock
- Inherent strength
- No loose wires
- Forms its own selfedge when cut
- Quality assurance (EN ISO 9001: 2000)
- Confidence throughout chain of use
- Comprehensive range of mesh configurations
- Widely applicable
- Minimum waste

Applications

Betafence Weldmesh is easy to work with and is easily combined with other materials. This makes the mesh multifunctional and can be used in conjunction with wood, angle iron, slotted or punched angle and steel tube. The use of Weldmesh in an industrial application is extensive. Joint development programs with end users and specifiers are frequently undertaken.

Specifications

- Wire diameter from 2,5 up to 6,0 mm
- Variable mesh sizes from 25 mm onwards
- A range of different panel sizes

Coatings

- Bright wire
- Welded from galvanised wire
- Other coatings available on request
